Kitchen & Dining Facility) should be replaced with new construction that is consistent with modern construction practices. Construction documents outlining the proposed repairs are a part of this Scope of Work.

b. Original construction of the Armory included dormers on top of the roof structure for ventilation and lighting purposes. These features have become obsolete with the installation of modern mechanical and lighting systems and have not been included in the repair recommendations in the attached construction documents.

c. Damage to existing adobe walls should be repaired in accordance with the attached construction documents and Preservation Brief 5 prepared by the National Park Service. A copy is attached at the end of this report for review. Significant amounts of damage were observed to the visibly accessible portions of the adobe walls at the north-east portion of the Armory, in the area that is currently the Cafeteria; damage was observed in the Museum area to a lesser degree. The majority of the interior of the building is covered and not visibly accessible.

d. Areas of active damage to the exterior stucco system, and previously patched areas that have been damaged again, should be repaired in accordance with the attached construction documents to reduce the occurrence of damage to the adobe masonry behind the stucco system.

Existing materials should be replaced with new material of matching size, grade and finish.

## EXHIBIT 1 SCOPE OF WORK

g. Existing wood columns and posts that have split should be repaired in place by pressure epoxy injection as outlined in the attached construction documents. The repaired areas should be finished to match the adjacent wood finish.

Mechanical ductwork in areas with exposed roof structure should be modified as required to comply with the State Historic Preservation Office criteria for historic buildings. Existing mechanical units should be stored in a protected area during the repair process.

i. Roof drains, drain pipes and over-flow drains should be evaluated during the repair process to ensure that adequate roof drainage is provided. New Roof drains, drain pipes and over-flow drains should be installed to replace defective pies as needed.
